

LONGWALL OPERATIONS IN ILLINOIS AND SUBSIDENCE MITIGATION

29th Annual Kentucky Professional
Engineers In Mining Seminar

Dan Barkley
Illinois DNR
Office of Mines and Minerals

Illinois Mining History

1915: Undercutting 14-foot Herrin Coal in southern Illinois.

- ▣ **1st recorded mining in 1810** (Underground near Murphysboro)
- ▣ **Mining on an industrial scale began in the 1890's**
- ▣ **Surface mining became significant in the 1920's**

Historical Underground Mining

- ▣ 1.1 million acres have been undermined in Illinois by:
 - Room and pillar mining
 - Longwall mining

Trend of Surface to Underground Through Time in Illinois

Brief Illinois Longwall History

SURVEY OF SEPT. 1873
SURVEY OF FEB. 1875
SURVEY OF APR. 1876
SURVEY OF APRIL 1877

Longwall “Hand Mining”

- First practiced in 1857 in LaSalle County
- 1885 Illinois Coal Report used term “Long-wall”
- Waste rock packed into mined voids which limited, but did not prevent subsidence
- 1857-1951- over 100 mines in 15 counties

Packed rock limited but did not prevent subsidence

Modern Mechanized Longwall Use in Illinois

Illinois mechanized Longwall STATS

- 48,000 acres have been longwalled since mechanized longwall began in the 1970's
- 14 individual longwall mines in 7 counties
- 290 + individual longwall panels extracted
- 4 longwall mines currently active with 6 longwall units (2 mines run 2 longwall faces)
- (Recently reduced by 1 due to spontaneous combustion problems (Hillsboro))

Surge in Longwall Production

<u>METHOD</u>	<u>TONS</u>	<u>PERCENT</u>
Surface	4,096.353	8
Room & Pillar	15,385,322	30
<i><u>Longwall</u></i>	<i><u>31,856,822</u></i>	<i><u>62</u></i>
TOTAL	51,338,497	100

Longwall face

1400 feet

3 to 5 + miles

Shaft entry

Slope entry

Advances in Longwall Mining Over Time (80's to present)

- ▣ Panel widths increase from 600 feet to over 1400 feet
- ▣ Panel Lengths increase from 1 mile to 5 to 6 miles
- ▣ Panel advance rates per day increase from 35 feet to Over 100 feet despite wider widths.

Pros

- ▣ Faster subsidence creates more uniform subsidence
- ▣ Less strain results in less damage to surface structures

Cons

- ▣ To Achieve greater advance - Longwall equipment is oversized for the seam
- ▣ Roof and floor taken creates tremendous increase in percent reject (+ or - 50 percent)
- ▣ Refuse Disposal space has become the greatest obstacle

SUBSIDENCE IMPACTS

Illinois Longwall Experience

- ▣ Cropland
- ▣ Perennial streams
- ▣ Homes and buildings
- ▣ Public highways
- ▣ Railroads
- ▣ Major Pipelines
- ▣ Methane gas plant
- ▣ Capped slurry impoundment

Farmland subsidence issue

- ▣ Subsidence creates drainage problems that cause standing water
- ▣ Standing water created by subsidence kills crops
- ▣ Proper drainage must be eliminated to restore farming capabilities

SUBSIDENCE CONTROL PLAN

Land

- ▣ Existing and projected contours required to define potential drainage problems (This requirement is unique to Illinois)
- ▣ Drainage interruptions must be corrected
- ▣ Addition of drainage tile may be needed to supplement surface drainage
- ▣ Temporary crop damage compensation \$\$ is required until repair is complete (Not a SMCRA or state regulation...we work it into each individual longwall permit)

SUBSIDENCE CONTROL PLAN

Streams

- ▣ Pre and Post Stream Profiles along larger streams typically required to define extent of mitigation
- ▣ Stream loss does not occur due to geologic setting. Unlike Appalachia, Illinois must address ponding and out of bank flooding
- ▣ Gate cuts and dredging downstream of the last panel to relieve ponding is often necessary
- ▣ Stream bank berms are sometimes necessary with one way flap gate culverts to control out of bank flooding
- ▣ **CORPS** 404 permitting (if necessary) occurs at the time of mitigation - not in the up-front permitting process.

Strain Monitoring During Subsidence

So What is the problem with LONGWALL MINING ??

- It is intrusive & stressful for surface owners
- It does not always go smoothly
- Misinformation spreads easily and quickly
- Correcting and clarifying misinformation can be difficult

QUESTIONS??
