

# Current Research

Kyle Perry, Ph.D., P.E.

Assistant Professor – Mining Engineering

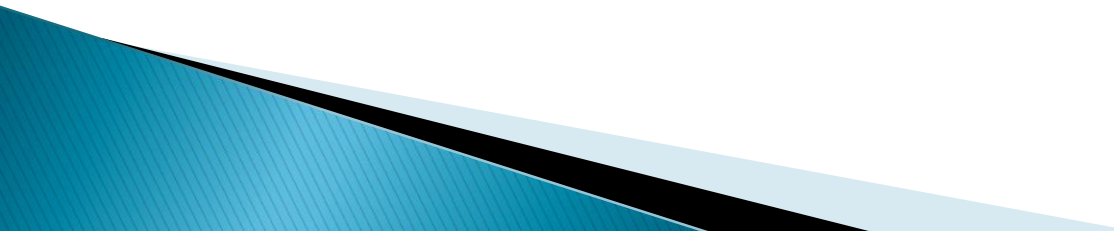

# Highlighted Project

- ▶ Identification of Potential Roof Control Problems Using LED Lighting & Numerical Modeling of Highwall Stability Using FLAC3D
  - Focus on the latter today
- ▶ Funded by NIOSH
  - Capacity building for Rock Mechanics Specialists
  - 5 Year Project
  - Entering Second Year Next Month

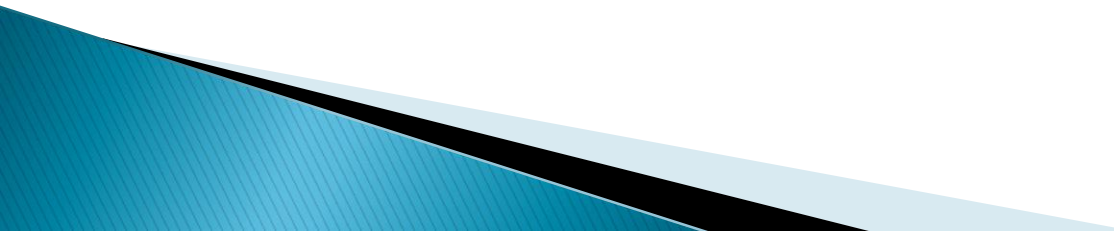

# Project Team

- ▶ PI's
  - Kyle Perry
  - Kot Unrug
- ▶ Graduate Students
  - Kevin Harris
  - Michael Raffaldi
  - Adam Gamblin

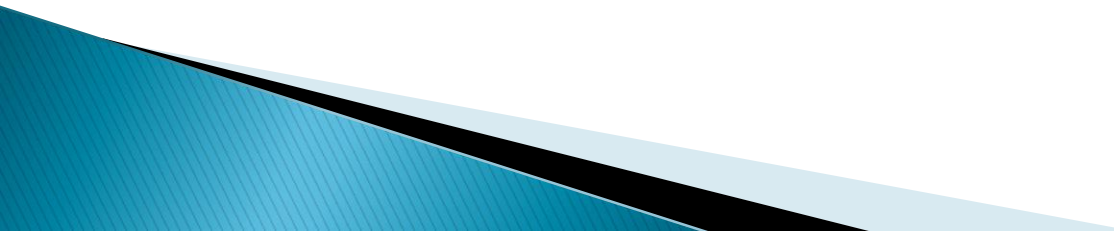

# Project Overview

- ▶ Highwall Failures Comprise 15% of surface coal mining Fatalities since 2000
    - Some surface mines still don't utilize presplits for their highwall or don't take geology into account when presplitting
  - ▶ Can nearby blasting induced ground vibrations lead to highwall failures?
  - ▶ If so, what are the vibration limits?
- 

# General Methodology

- ▶ Monitor Highwall Movement Over Time
    - Scan highwall multiple times over months
  - ▶ Measure ground vibrations with seismographs
    - Tie vibrations to shot design/location
  - ▶ Model in FLAC3D
    - Replicate Results
    - Push to Failure
    - Provide limitations to blasters
- 

# Location

- ▶ Near Logan, WV
  - ▶ Mountaintop and Contour Job
  - ▶ Shale/Sandstone Highwall
  - ▶ Blasting
    - 7 7/8" Emulsion ANFO Blend
    - ~20' Burden and Spacing
    - Electronic Detonators
- 

# Status

- ▶ Two Seismographs Deployed
  - Plans for a third soon
  - Remote Download
- ▶ Initial FLAC3D Models Built
- ▶ Initial Scans Performed

# Initial Models

- ▶ Basic Geometry
- ▶ Mohr–Coulomb
  - Average material models for information we gathered
- ▶ Static Models
  - Evaluate in–situ stability
  - Refine material properties
  - Begin implementing geology
    - Faults, hillseams, etc.

Step 1637

7/24/2012 11:39:03 AM

## Axes

### SEL Geometry

Colorby: ID

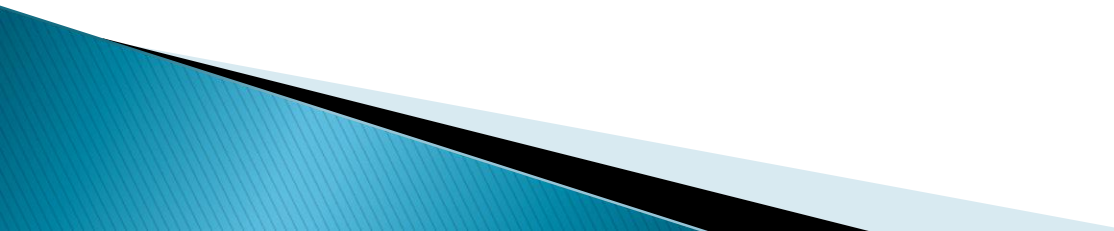

### Zone

Colorby: Group 1

- sandstone
- coal
- shale

# Revised Models

- ▶ Begin Dynamic Analysis
  - ▶ Introduce Ground Vibration Traces
  - ▶ Re-examine the Model
  - ▶ Identify Modifications
    - Boundary Conditions
    - Wave Corrections
    - Material Damping Properties
  - ▶ Relate to Highwall Scans
- 

File: 3857201206251706008.dtb  
 Number: 008  
 Date: 6/25/2012  
 Time: 17:06  
 SN: 3857  
 Seis. Trigger: 0.050 in/sec  
 Air Trigger: 148  
 Sample Rate: 1024  
 Duration: 9.0 Seconds  
 Pre-Trigger: 0.50 Seconds  
 Gain: 2.0x  
 Voltage: 6.9

Peaks and Frequencies

PPV Maximum: 0.120 in/sec (0.1953 sec)  
 Acoustic: 116 dB @ 25.6 Hz (1.1846 sec)  
 Radial: 0.110 in/sec @ 11.6 Hz (0.2881 sec)  
 Vertical: 0.110 in/sec @ 13.4 Hz (0.7041 sec)  
 Transverse: 0.120 in/sec @ 15.5 Hz (0.1953 sec)  
 Vector Sum: 0.144 in/sec (0.1895 sec)  
 Last Calibration Date: 6/1/2010

Graph Information

Duration: -0.500 s To: 9.000 s  
 Acoustic Scale: 126 dB  
 Seismic Scale: 0.20 in/sec (0.050 in/sec/div)  
 Time Intervals: 1.00 sec

FFT Peak Frequencies

Acoustic: 5.63 Hz (Amp = 14.98)  
 Radial: 20.25 Hz (Amp = 23.45)  
 Vertical: 10.06 Hz (Amp = 23.88)  
 Transverse: 10.19 Hz (Amp = 26.21)

FFT Graph Information

Range: 1 to 100 Hz  
 Acoustic Scale: 14.98  
 Seismic Scale: 26.21

Step 31186

7/26/2012 3:23:59 PM

## Contour Of Velocity

# Maptek I-Site 8800 Laser Scanner

## ▶ Overview

- Range: 360° Horizontal, 80° Vertical
- 600m – 1,500m (reflectivity)
- 8800 p/s
- 70 megapixel imaging

## ▶ Accuracy

- 20mm @ 1,000 m, 10mm @ 200 m
- 0.01° Angular

## ▶ Advantages

- Automatic survey registration
- High resolution
- Minimal surveying
- Effortless

# Maptek I-Site Studio Software

- ▶ Overview
  - Compliments hardware
  - Import/process point cloud
- ▶ Features
  - Analyze 3D spatial data
  - Create surfaces, volumes, section & contours
  - Export high resolution visuals
- ▶ Advantages
  - Excellent data manipulation
  - Geotechnical Investigation tools

# Scanner Uses

- ▶ This project is just using it for highwall monitoring
- ▶ Stockpile Volumes
- ▶ Subsidence
  - If it can be placed high enough
- ▶ Impoundment Stability Monitoring
- ▶ Approximate Original Contour
- ▶ Almost anything one can think of!

# Summary

- ▶ Good Start
  - ▶ Established System
  - ▶ Great Location, Excellent Cooperation
  - ▶ Seismographs Installed
  - ▶ Initial Scanning
  - ▶ Models In Progress
- 
- ▶ Thank you for your time
-
